
Tuesday, June 1st, 2010

Dear Valued Customer,

Woongjin Chemical Co Ltd is pleased to announce a modification to our industrial and commercial reverse osmosis membrane elements as a result of an improvement to our membrane rolling process.

Starting May 1st, 2010, our 4-inch, 8-inch and 16-inch elements will no longer use the PET film in the external FRP coating. Due to this change, the external color of the RO element has slightly changed, from a pure white to an ivory color. In the image below, the element on the left is before the PET film was removed and the elements in the middle and right are after the PET film has been removed:

We appreciate and value your business. If you have further questions please contact your local CSM sales representative or send us an email to csm@wjchemical.co.kr.

Sincerely,

Customer Service Team
Woongjin Chemical Co Ltd
